## **Project Update, as of 1/20/2023**

### **Traffic Delays and Rerouting in Hagatna Caused by GWA Water Main Break**

The traffic interruption this morning in Hagatna in front of Guam Autospot was caused by a GWA water main break and not by our heavy haul transport project. We have not conducted any transports to date.

Our top priorities are to ensure the safety of Guam's drivers and our transport personnel; as well as the protection of Guam's roads, bridges and culverts.

Assessments were made months in advanced on the 12-mile pathway on Rt. 1, north and southbound, and our engineers and project managers have planned for situations such as weaker infrastructure, which is why we are laying steel plates on the roads right before we traverse them.
